

**Date: Thursday, 6<sup>th</sup> April 2017**

**clean heat**

**Location: Hotel Baronka, Mudrochova 2, Bratislava, Slovakia**

Outdoor air pollution causes approximately 400,000 premature deaths in Europe every year. Like many other Member States, Slovakia still fails to meet the limit values for air quality set by the European Union. Therefore, solutions for better air quality are strongly required to protect human health.

## Workshop How to improve Slovak air quality?

Written by Miloš Veverka - Last Updated Tuesday, 18 April 2017 18:16

---

In the morning session, our event will focus on legal actions for a better implementation of air quality legislation. For this, local measures in Slovakia will be evaluated, and successful approaches in other countries will be presented. In addition, we will discuss possibilities to transfer these experiences and to initiate legal action in Slovakia.

In the afternoon session, domestic heating as the main source of particles is at the center of attention. If nothing is done, projections indicate that in 2030 almost two-thirds of PM<sub>2,5</sub>-Emissions and more than 85% of black carbon will be emitted by the domestic heating sector. In the course of this part of the event, we will debate on the impact of wood burning and the current situation in Slovakia as well as on solution approaches from other European countries.

Workshop languages are Slovak and English. Simultaneous interpreting is provided.

To participate at the workshop you need to [register](#) **untill 31.03.2017** or untill the capacity is filled. The workshop is free of charge for registered participants.

More information (incl. agenda) can be found in the invitation.
