

Ecodriving

Written by Miloš Veverka - Last Updated Friday, 21 February 2014 12:53

It is possible to save up to 20 % of fuel consumption by energy-efficient driving. This saves your money and also the environment. However, ecodriving is a broader term. It begins with the choice of appropriate way of transport, continues with the choice of the right car at acquisition, energyefficient driving, smart use of air-conditioning and it ends by environmentally friendly car washing. Ecodriving is simply the approach, which reduces detrimental effect of driving or mobility on the environment.

Basic information about ecodriving you can find in attached leaflet.
